

Comact's New Saw Lubrication Panel Retrofit for Optimal Efficiency

There are several reasons to consider our new Saw Lubrication Panel retrofit.

We have:

Redesigned the water control system for maximum efficiency

Added several user-interface screens to facilitate operation and adjustment

Reorganized the alarm system to facilitate troubleshooting and maintenance

Technical Highlights

New user-friendly interface to:

- Set precise water flow requirements (for low and high flow) in each zone
- Configure alarms for each lubrication zone

Improved performance:

- New analog water flow control
- Improved water pressure system
- Improved precision reduces use of water (less water in sawdust and/or on the floor)

Easier troubleshooting and maintenance:

- Increased number of alarms
- Alarms organized by lubrication zones
